1. The following is an examiner's statement of reasons for allowance:

The present invention is a system and method for servicing data transaction within a processing device using common data bus. The system comprises plurality of source agents and destination agents operable to transmit and receive a plurality of data cells. The invented system further comprises a combiner, which can generate the active state information corresponding to all possible combinations of the source agent and destination of agents that are active for transmission or reception, respectively. Also, the system includes two different stages scheduler, one is for virtual channel and the other one is for physical connection. Both schedulers can generate grant signal for a selected pairs of source and destination agents corresponding to the active state information that generated by combiner.

The closest prior art, Walker et al. (US Pat. No. 5,862,338) shows similar system method, which discloses a common bus system connected with a plurality of network devices, and each device has plurality of duplex ports. Walker also teaches has an information list for the active state of source and destination ports of each device. But Walker fails to teach the information list has the state of physical connections of each port. Furthermore, Walker fails to disclose there is a scheduler in the system. The second prior art, Novick et al. (US Pat. No. 6,404,737 B1) teaches

the two schedulers for virtual channel and virtual path, respectively. But Novick fails to disclose the scheduler can be used for connection (physical) level. Also, Novick fails to disclose active state information that can operate with the schedulers.

Therefore, the instant application is allowable.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
